

GAS TURBINE HEAT EXCHANGER ASSEMBLY  
AND METHOD FOR FABRICATING SAME

ABSTRACT OF THE DISCLOSURE

A method for assembling a gas turbine engine including a compressor and a combustor includes providing a heat exchanger assembly that includes at least one heat exchanger, and coupling the heat exchanger assembly to the gas turbine engine such that the heat exchanger is positioned substantially concentrically with respect to a gas turbine engine axis of rotation, and such that the heat exchanger is configured to channel compressor discharge air from the compressor discharge air to the combustor.
